

# Practical

- Create one form as below having four items with the respective prices.  
(Form has only two input fields Checkbox and Quantity textbox, rest all things can be taken static. )

<input checked="" type="checkbox"/> Item A	<input type="text" value="Enter quantity"/>	× 100 Rs
<input checked="" type="checkbox"/> Item B	<input type="text" value="Enter quantity"/>	× 200 Rs
<input checked="" type="checkbox"/> Item C	<input type="text" value="Enter quantity"/>	× 500 Rs
<input checked="" type="checkbox"/> Item D	<input type="text" value="Enter quantity"/>	× 300 Rs

**SUBMIT**

- User have to prepare an order by selecting the combinations of different items and entering the quantity of those items.
- Add proper validations to form.
- When submit button is clicked apply below logic to calculate final value of an order:

1. If user selects combinations of below items, then change the price as described below:

- Combo of item A + Item B = Rs 250
- Combo of item A + Item C = Rs 450

2. Add below discounts to the order if the total order value satisfies the respective conditions:

- Order value more than 1500, give flat Rs.50 off.
- Order value more than 2000, give 8% off.
- Order value more than 4500, give 10% off.

Note: Maximum discount amount should not be more than Rs. 500.

3. Apply delivery charges to order as below:

- If total amount is up to Rs. 1000, then delivery charge should be Rs. 80.
- If total amount is more than Rs. 1000 but up to Rs. 3000, then delivery charge should be Rs. 50.
- If total amount is more than Rs. 3000 then delivery should be free.

4. Above offers should be applicable on every Wednesday and Thursday.

Save your output in database and display it under the form as below:

### Output

Item	Price
Item A	100
Item B	200
Sub total	300
Discount	10
<b>Total</b>	<b>290</b>

**GOOD LUCK!**
